

Good morning,

Karen O'Rourke had arranged a CEU lunch presentation next Thursday, October 11 at noon at Beef O'Brady's, 7306 SW 34th Avenue.

The course information is this:

Fabric in Architecture- 1 HSW AIA Credit

The Where, the What's, & the Why's...

This course will offer applications using textiles in architectural applications from actual projects around the world; solving everyday issues with common materials and methods.

- Building Systems will be discussed – how these applications can reduce HVAC usage is one example.
- Designs using textiles/composite membranes will be shown; how they incorporate into the finished product and enhance the usage of the facility.
- Environmental impact will be a focus in each of the projects – short term and long term.
- You will be shown real world applications that are a common part of architecture in other parts of the world.

A Sampling of Lawrence – This 10-minute speaker-led visual presentation showcases the many unique products in the Lawrence portfolio- awnings, canopies, exhibits, tensioned fabric structures and architectural elements. From traditional to original, Lawrence designed fabrications are presented in a casual overview style, highlighting interesting facts. The audience learns about the latest, greatest all-metal trends in the industry while viewing some of the most impressive structures around today.

Please let me know if you plan to attend so we may make proper arrangements.

Thanks,

Sarah deGrood, AIA

Architect
